Summary

Software Engineer with strong foundations in Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, and Computer Networks. Experienced in building full-stack web applications using React.js, Node.js, Express.js, MongoDB, and REST APIs, along with AI-powered applications using LangChain and RAG. Passionate about solving complex engineering problems and building scalable software systems.

Education

G.L. Bajaj Institute Of Technology and Management, Greater Noida <i>Bachelor of Technology in Artificial Intelligence & Data Science</i>	Oct 2023 - May 2027 CGPA : 7.6
La Matina School, Lakhimpur Kheri <i>Class XII(CBSE)</i>	May 2023 78.4%
La Matina School, Lakhimpur Kheri <i>Class X(CBSE)</i>	August 2021 90.6%

Technical Skills

- Programming Languages :** C++, Java, Python, JavaScript
- Frontend:** React.js, HTML5, CSS3, JavaScript
- Backend:** Node.js, Express.js, REST APIs, JWT Authentication
- Databases:** MySQL, MongoDB
- Core CS:** Data Structures & Algorithms, Object-Oriented Programming, DBMS, Computer Networks
- Tools:** Git, Github, VS Code, Postman
- Cloud:** AWS Cloud Foundations, Netlify, Vercel
- Artificial Intelligence:** LangChain, Hugging Face, Retrieval-Augmented Generation (RAG)

Projects

AI Chatbot (RAG-based Document Assistant) GitHub	Jan 2026
Tech Stack: <i>Python, LangChain, Hugging Face, Gemini API, FAISS/Vector Database, FastAPI</i>	
- Developed an AI-powered document chatbot capable of answering user queries using Retrieval-Augmented Generation (RAG). - Built a document ingestion pipeline to process PDFs and generate vector embeddings for semantic search. - Integrated LangChain, Hugging Face embedding models, and Gemini API to provide context-aware responses. - Developed backend APIs for document upload, indexing, and conversational querying. - Improved response relevance through vector similarity search and modular backend architecture.	
VitalDrop - Blood Donation Platform GitHub	April 2025 - June 2025
Tech Stack: <i>React.js, Node.js, Express.js, MongoDB, JWT, REST APIs</i>	
- Developed a full-stack blood donation platform connecting donors, hospitals, and recipients through a centralized web application. - Built RESTful APIs for donor registration, blood requests, and user management using Node.js and Express.js. - Implemented JWT-based authentication and role-based authorization to secure user access. - Designed a responsive frontend using React.js and integrated MongoDB for efficient data storage and retrieval. - Optimized API interactions and database queries to improve application responsiveness and user experience.	
VisionTrack AI – Intelligent Surveillance System GitHub	June 2026 - Present
Tech Stack: <i>Python, OpenCV, HTML, CSS</i>	
- Developing an AI-based surveillance system for real-time CCTV monitoring. - Using OpenCV to detect and track objects from live video streams. - Building a backend to process video frames and display detection results. - Working on improving the system's accuracy and overall performance.	

Achievements & Certifications

- Achievements
- Qualified TCS CodeVita Season 13 – Round 1
 - Top 15 Team – IIT Roorkee Ideastorm 2025
 - Participated in multiple national-level hackathons and innovation challenges
- Certifications
- AWS Academy Graduate – [Cloud Foundations](#)
 - Deloitte Australia Cyber Job Simulation (Forage)
 - Generative AI for Beginners – Simplilearn
